6. Troubleshooting:

(1) Why is the monitor screen not working?

Please connect the power supply when using to prevent the power shortage.

(2) Why does the monitor display logo with no image and only boot screen?

Check whether the signal data cable of the device is connected properly, whether the HDMI cable or Type-C cable is connected to the device properly. To ensure that the device is running normally, restart device and display. Phone users can update the system, computer users can update the drive.

(3) Why does the flash screen appear when the AMD computer connects to HDMI?

Please check if the HDMI output value of your graphics card is 1920*1080P 60Hz.

(4) Why is the display not displaying images after a Type-C input is connected?

Make sure that your model is on the list of supported mobile phones.

After restarting the mobile phone and the display, the corresponding signal source channel is selected through the "signal input" button.

(5) Why can't the speakers make a sound?

Check whether the display has set the silence or the volume to "0", and then set the device's voice in the volume settings option on the device.

Notice for FCC

This device complies with Part of 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference. (2) this device must accept any interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receivers is connected.
- Consult the dealer or an experienced radio/TV technician for help.
